

Jshouseofpoker App - Client Weekend Requirements Summary

Purpose

- * Summarize the client's weekend requirement messages into a clear developer handoff.
- * Capture the current product direction: Jshouseofpoker App is expanding from a poker-only application into a social gaming platform.
- * Provide an implementation-oriented overview that can be shared with product, design, backend, frontend, QA, and admin stakeholders.

Product Direction

- * Jshouseofpoker App should feel like a complete social poker community, not just a table lobby.
 - * Players should have reasons to stay active even when they are not currently playing a hand.
 - * The platform should combine a social network, chat community, game platform, player discovery system, content feed, poker lobby, and live table experience.
- * The main user loop should connect the social and game areas together.
 - * Feed Post -> Profile -> Chat Room -> Table.
 - * Example flow:
 - * A player creates a post.
 - * Another player comments or supports it.
 - * The players become friends.
 - * They join a chat room.
 - * Someone creates a 357 table.
 - * The chat room members move directly into the game.
- * The lobby should preserve the current "house of poker" feeling.
 - * The client likes the lobby atmosphere and wants future social additions to complement that identity.

Primary App Areas

- * Player Feed.
 - * Facebook-style feed experience branded for Jshouseofpoker App.
 - * Familiar post cards, reactions, comments, sharing, and table invites.
- * Chat Rooms.
 - * Main social hub where players gather first.
 - * Players should talk, meet people, hang out, discuss games, and organize tables naturally.
- * Friends System.
 - * Online friends shown automatically.
 - * Search by name or username for offline friends and other players.
 - * Quick invites to chat rooms and tables.
- * Player Profiles.
 - * Profile posts, stats, chip or clip count, badges, cover photos, and social discovery.
- * Live Tables / The Floor.
 - * Live table area with real-player availability protected from bot overfill.
 - * AI should monitor open seats, bot-filled tables, suspicious play, chat issues, and tables

needing real players.

- * Backend / Admin Controls.

- * Admin broadcast messaging into table chat bars.

- * Audit logs, permissions, rate limits, safety filters, and future scheduling.

- * A.I. Prime.

- * Platform-wide assistant available inside chat, table, profile, feed, recommendations, translation, moderation, and support workflows.

1. Chat Rooms and Chat Room to Table Flow

- * Chat rooms are the main priority.

- * Players should enter chat rooms first to talk, meet others, build interest, and organize games.

- * Creating a table should feel like a natural option after conversation, not the primary screen.

- * Required flow.

- * Enter Chat Room.

- * Pick Game.

- * Set Table Tier / Rules.

- * Invite Room Players.

- * Launch Table.

- * Chat room interface requirements.

- * Create Table button.

- * Invite to Table button.

- * Game selection.

- * Table tier selection.

- * Private or public table option.

- * Player list.

- * Message notification support.

- * Direct move from chat room into the live table UI.

- * Expected user experience.

- * A player joins a room to socialize.

- * Room members discuss what to play.

- * A player creates or configures a table from inside the room.

- * Room members receive invites.

- * Players move directly into the live table.

2. Facebook-Style Player Feed

- * The feed should feel familiar, similar to Facebook, while being branded for Jshouseofpoker App.

- * Required feed structure.

- * Post box at the top.

- * Scrolling post cards.

- * Player avatar.

- * Player name.

- * Player status.

- * Likes, reactions, or Supporters.

- * Comments.

- * Share / promote options.

- * Invite to Table option.

- * Feed card actions.
 - * Support.
 - * Comment.
 - * Share.
 - * Gift Clips.
 - * Promote for Creator.
 - * Invite to Table when relevant.
- * Feed should support social discovery.
 - * Posts should lead users to profiles.
 - * Profiles should lead to friend requests, chat rooms, and tables.
 - * Posts can help fill tables through shares, invites, and promotions.

3. Friends Area and Player Search

- * Online friends should be shown by default.
 - * The default Friends area should not show offline friends or random players.
 - * Online friends should have fast action buttons.
- * Required quick actions for online friends.
 - * Chat Invite.
 - * Table Invite.
- * Search by Name / Username is required.
 - * Players can search for offline friends and other players.
 - * Search results should support:
 - * Viewing profiles.
 - * Sending friend requests.
 - * Inviting players to chat rooms.
 - * Inviting players to tables.
- * Expected behavior.
 - * Default view = online friends only.
 - * Search view = offline friends and wider player discovery.

4. Player Profiles

- * Profiles should support social identity and discovery.
- * Required profile elements.
 - * Profile posts.
 - * Player stats.
 - * Chip or clip count.
 - * Status badges.
 - * Cover photos.
 - * Social visibility.
- * Community metrics to consider.
 - * Total Supporters.
 - * Monthly Supporters.
 - * Top Supported Posts.
 - * Top Supporters.
 - * Clips Received From Supporters.
- * Profiles should connect into the wider loop.
 - * From a profile, players should be able to send friend requests, invite to chat rooms, invite

to tables, view posts, and discover status or performance.

5. Admin Chat Broadcast Feature

- * Add a backend Admin section that lets the site owner send messages directly into table chat bars.
- * Admin broadcast modes.
 - * Global Message:
 - * Sends one admin message to all active table chat bars at once.
 - * Table-Specific Message:
 - * Selects one table and sends the message only to that table's chat bar.
- * Message display requirement.
 - * Messages should be clearly marked as 'ADMIN MESSAGE'.
- * Backend requirements.
 - * Admin-only permission checks.
 - * Select all tables or one table.
 - * Message text box.
 - * Send now button.
 - * Optional schedule later feature.
 - * Socket.IO event to push messages live.
 - * Audit log showing who sent the message, when it was sent, and where it was sent.
 - * Rate limits to prevent spam.
 - * Moderation and safety filter before sending.
- * Business use cases.
 - * Site announcements.
 - * Ads and promotions.
 - * Updates.
 - * Tournament-style alerts.
 - * Support messages.
 - * Sponsor posts inside table chat.

6. Social Table Promotion System

- * When a player creates a table, they can optionally purchase a Table Promotion Campaign.
 - * Example fixed fee: \$2.
 - * Higher tiers may include \$5 Featured Promotion and \$10 Top Feed Placement.
- * Promotion placements.
 - * Facebook-style player feed.
 - * Chat rooms.
 - * Player directory highlights.
 - * Selected table lobbies.
- * Targeting options.
 - * All players.
 - * Players with a minimum clip balance.
 - * Players within a clip range, such as 100-1,000 clips or 1,000-10,000 clips.
 - * High Roller players.
 - * Shark players.
 - * Up & Coming players.
 - * Friends only.
 - * Specific game players, such as 357, Shanghai, 7/27, or In-Between the Sheets.

- * Multiple targets combined.
- * Automatic shutoff requirement.
 - * Promotion status = Active while the table has open seats.
 - * Promotion status = Complete once the table fills up.
 - * The ad should automatically stop when the final seat is taken.
 - * This prevents players from paying for impressions after the table is full.
- * Gift Clip promotion incentives.
 - * Hosts can attach incentives to promoted tables.
 - * Examples:
 - * "Join this table and receive 50 clips."
 - * "First 3 players receive 100 clips."
 - * "High Roller table - 500 clip welcome gift."
 - * Promotions should only display to qualified players based on targeting rules.
- * Revenue opportunities.
 - * Standard table promotion.
 - * Featured promotion.
 - * Top feed placement.
 - * Sponsored chat room placement.
 - * Priority directory placement.

7. The Floor, Bots, and Real Player Seat Protection

- * The Floor means the live table area.
- * Before bots fill a table, the system should keep an open seat available for real players.
 - * Bots should support action without blocking human users from joining.
- * AI monitoring should watch The Floor for:
 - * Open seats.
 - * Bot-filled tables.
 - * Player traffic.
 - * Suspicious play.
 - * Chat problems.
 - * Tables needing real players.
 - * When to add bots.
 - * When to remove bots.
- * Product intent.
 - * Bots are used to keep games moving.
 - * Real players should always have access to available action where possible.

8. Enhanced Support System and Community Supporters

- * Replace basic "likes" language with community-focused "Supporters" language.
 - * Use "250 Supporters" instead of "250 Supports."
 - * This makes interactions feel more like community backing than a simple like count.
- * Support action.
 - * Free reaction.
 - * Adds the player to the supporter count.
 - * Can show activity such as "Ra Frost supported this post."
- * Post statistics can include:
 - * Supporters.

- * Comments.
- * Shares.
- * Clips Gifted.
- * Sponsored by number of players.
- * Enhanced support actions.
 - * Support a post.
 - * Gift clips to a post creator.
 - * Promote another player's post.
 - * Sponsor a player's table advertisement.
 - * Boost a tournament, game room, or chat room announcement.
 - * Help new players gain visibility.
- * Safety controls.
 - * Daily gifting limits.
 - * Anti-spam protections.
 - * Fraud detection.
 - * Promotion approval rules.
 - * Audit logs.
 - * Blocked-user restrictions.
 - * AI monitoring for suspicious gifting patterns.

9. Gift Clips as a Premium Feed Action

- * Gift Clips should be a visible premium action on the post card, not hidden in a menu.
- * Suggested post card action row.
 - * Support.
 - * Comment.
 - * Share.
 - * Gift Clips.
 - * Invite to Table when applicable.
- * Gift Clips panel requirements.
 - * Title: Gift Clips to This Player.
 - * Gift amount selector.
 - * Preset buttons:
 - * 100 clips.
 - * 500 clips.
 - * 1,000 clips.
 - * 5,000 clips.
 - * 10,000 clips.
 - * Custom amount.
 - * Optional message field.
 - * Example messages: "Great post!", "Good luck at the tables!", "Welcome to Jshouseofpoker!"
 - * Send Gift button.
- * Feed statistics example.
 - * 250 Supporters.
 - * 42 Comments.
 - * 17 Shares.
 - * 35,000 Clips Gifted.
 - * Sponsored by 8 Players.
- * Leaderboards to consider.

- * Most Supported Posts.
- * Most Shared Posts.
- * Most Gifted Posts.
- * Top Supporters.
- * Top Clip Givers.
- * Top Community Builders.

10. Sharing and Advertising Separation

- * Keep community, visibility, advertising, and gifting actions separate.
 - * Support = community encouragement.
 - * Share = visibility.
 - * Promote for Creator = paid advertising sponsorship.
 - * Gift Clips = direct premium help.
- * Share menu options.
 - * Copy Link.
 - * Share to Facebook.
 - * Share to Messenger.
 - * Share to Profile.
 - * Share to Feed.
 - * Share to Chat Room.
 - * Share to Table.
 - * Promote for Creator.
- * Share to Facebook behavior.
 - * Generate a shareable link.
 - * Open Facebook's share dialog with that link.
 - * Facebook should display the title, image or thumbnail, short description, and link back to Jshouseofpoker App.
- * Copy Link importance.
 - * Players can paste links into Facebook, Messenger, text messages, Discord, X, Reddit, email, and other platforms.
 - * Copy Link and Share to Facebook should be standard free options.
 - * Promote for Creator should remain a paid option.
- * Marketing benefit.
 - * Shared links can bring new players, returning players, table participants, chat room members, profile views, Supporters, and clip purchases.
 - * Players effectively become an organic marketing channel when sharing is effortless.

11. Promote for Creator

- * Promote for Creator should live inside the Share flow, not inside Support.
- * Purpose.
 - * A player can pay to help another player's post reach more people.
 - * The paying player sponsors the original creator's visibility rather than promoting themselves.
- * Promotion examples.
 - * \$2 Promotion.
 - * \$5 Promotion.
 - * \$10 Promotion.
- * Sponsored post statistics can display:

- * Supporters.
- * Comments.
- * Shares.
- * Sponsored by number of players.
- * Clips Gifted.
- * Product value.
 - * Great posts can receive support, gifts, shares, and sponsored promotion from other players.
 - * The original creator can gain reach without personally spending money.

12. A.I. Prime Chat Room Integration

- * A.I. Prime should be built into every chat and message screen as a visible AI button.
- * Placement.
 - * Near the message input area.
 - * Suggested layout: Message Box | Emoji | A.I. Prime | Send.
 - * Also available when a user taps or long-presses a message.
- * Core capabilities.
 - * Real-time translation.
 - * Show Original / Show Translation / Show Both.
 - * Message rewriting.
 - * Punctuation correction.
 - * Summarizing long chats.
 - * Explaining game rules.
 - * Helping create posts.
 - * Helping create table invites.
 - * Recommending friends.
 - * Recommending tables on The Floor.
 - * Helping users understand clip packages, statuses, and platform features.
- * Translation controls.
 - * Translate This Message.
 - * Auto-Translate Chat.
 - * Show Original.
 - * Show Both.
 - * Change Language.
- * User language support.
 - * Each user should have a preferred language setting.
 - * Messages can be translated into each user's selected language.
- * AI actions on selected messages.
 - * Translate.
 - * Explain.
 - * Summarize.
 - * Rewrite.
 - * Report.
 - * Ask A.I. Prime.
- * AI moderation scope.
 - * Spam.
 - * Scams.
 - * Harassment.
 - * Hate speech.

- * Impersonation.
- * Porn or explicit content.
- * Unsafe advertising.
- * Suspicious behavior.
- * Bot-like abuse.
- * Moderation approach.
 - * Flagged content should go to admin review.
 - * Automatic punishment should be reserved for severe violations.
- * Table discovery support.
 - * A.I. Prime should help players find tables using preferred games, clip balance, player status, open seats, friend activity, chat room activity, recommended tables, and AI-monitored table health.
 - * Example prompt: "Find me a 357 table with open seats."
 - * A.I. Prime should return matching active tables and allow the player to join or invite friends.
- * Chat room to table support.
 - * A.I. Prime can help users invite players, create tables, share table links, promote tables, gift clips, and set up games.
- * Product positioning.
 - * A.I. Prime should be a platform-wide assistant, not just a chatbot.
 - * It should connect chat rooms, The Floor, player profiles, posts, table invites, translation, moderation, and recommendations.

13. Notifications and Messages

- * The client specifically requested notifications to messages.
- * Expected notification areas.
 - * New chat room messages.
 - * Chat invites.
 - * Table invites.
 - * Friend requests.
 - * Post comments.
 - * Supporter activity.
 - * Gift Clip activity.
 - * Promotion or sponsored post activity.
 - * Admin broadcast messages where appropriate.
- * Notifications should help connect the full loop.
 - * Feed activity can pull users into profiles.
 - * Profile and friend activity can pull users into chat rooms.
 - * Chat activity can pull users into tables.

14. Implementation Priority Recommendation

- * Phase 1: Chat-room-first social hub.
 - * Chat room list and room UI.
 - * Player list.
 - * Message notifications.
 - * Create Table and Invite to Table controls inside the chat room.
 - * Direct navigation from chat room to live table UI.

- * Phase 2: Feed and social actions.
 - * Post box.
 - * Scrolling post cards.
 - * Supporters, comments, shares, Gift Clips, and Invite to Table.
 - * Share menu with Copy Link and Share to Facebook.
- * Phase 3: Friends search and profiles.
 - * Online friends default view.
 - * Search by name / username.
 - * Profile viewing, friend requests, chat invites, and table invites.
- * Phase 4: Admin broadcast system.
 - * Admin-only backend UI or endpoint.
 - * Global/table-specific chat broadcast.
 - * Socket.IO delivery, audit logs, rate limits, and moderation filters.
- * Phase 5: Promotions and monetization.
 - * Table promotion campaigns.
 - * Promote for Creator.
 - * Gift Clip promotions and incentives.
 - * Automatic campaign shutoff when a table fills.
- * Phase 6: A.I. Prime and advanced moderation.
 - * Translation.
 - * Message assistance.
 - * AI table recommendations.
 - * Moderation queues.
 - * Bot and table-health monitoring.

15. Key Takeaway

- * The client does not expect everything to be completed overnight.
- * The biggest immediate direction is to make Jshouseofpoker App feel like a community-first social poker platform.
- * The strongest product loop is:
 - * Player Feed -> Player Profile -> Chat Room -> Live Table.
- * Chat rooms should be the first major focus because they create the social bridge between casual conversation and live gameplay.
